

**Figure A-1. Daily Average Flow for the Rubicon River at Ellicott Bridge from October 30, 2009 to May 22, 2010.**

The flow study was to be conducted on a spill or high flow event with (1) flow magnitudes between 500 cfs and 800 cfs (measured at Ellicott Bridge) and (2) sufficient duration to enable a study team to assemble and safely boat the reach in a 1 or 2-day trip.
