

**POTENTIAL RESOURCE ISSUE:**

Visual quality.

**PROJECT NEXUS:**

Project facilities and Project reservoirs could affect visual quality.

**POTENTIAL LICENSE CONDITION:**

- Visual Resources Plan

**STUDY OBJECTIVES:**

Identify all sensitivity level 1, 2, and 3 viewsheds in the study area.

Document the existing visual condition (EVC) of all Project facilities from associated viewsheds.

Identify locations of potential Project betterments with respect to identified viewsheds.

Document Eldorado National Forest (ENF) Land and Resource Management Plan (LRMP) and Tahoe National Forest (TNF) LRMP Visual Quality Objectives (VQOs) in the study area.

**EXTENT OF STUDY AREA:**

The study area will include Project facilities, Project reservoirs, potential Project betterments (based on conceptual designs), and their affected viewsheds. The viewsheds include travel routes, recreation areas, and water bodies from which the existing Project facilities or potential Project betterments are visible to the public.

**STUDY APPROACH:**

Project Facility Assessment

- Identify the EVC of all Project facilities.
- In consultation with the USDA-FS, photograph the Project facilities and identify key observation points (KOPs). Map and describe the locations of the KOPs.
- Map Project facilities and potential Project betterments, their associated viewsheds and documented VQOs.
- Identify the land management direction associated with the VQOs relative to existing Project facilities and potential Project betterments. The VQOs associated with the existing Project facilities and reservoirs are described and mapped in the *Middle Fork American River Hydroelectric Project (FERC No. 2079) Draft Existing Resource Information Reports, Second Series (PCWA 2006)*.
- In consultation with the USDA-FS, evaluate whether the EVC of Project facilities and potential Project betterments meet the desired VQOs of the ENF-LRMP and TNF-LRMP.
- At Project reservoirs that undergo water level fluctuations (i.e., French Meadows and Hell Hole Reservoirs), photograph the reservoirs from KOPs at full pool, lowest expected

pool and near the first of each month during the peak recreation season (Memorial Day through Labor Day).

- In consultation with the USDA-FS, evaluate whether the Project reservoirs meet the desired VQOs of the ENF-LRMP and the TNF-LRMP.
- All evaluations would be performed in accordance with the guidance contained in the USDA-FS National Forest Landscape Management, Visual Management System (Volume 2, Chapter 1, Agricultural Handbook 462, 1974).

**SCHEDULE:**

To be developed in early 2007.
